1. Answer all these questions using the Banker's Algorithm. The objective of this exercise is to find out whether the current state (see below) of the system is safe. For this you must find a sequence in which processes complete. To find the unique sequence, you must always check the next process to complete by starting from Index (i) 0. If there is no sequence, select for each process the answer N/A.

First process to complete is _______
Second process to complete is ________
Third process to complete is ________
Fourth process to complete is _______
Fifth process to complete is ______
The system is ________

i	Allocation			Need		
	A	B	C	A	B	C
0	3	0	2	7	1	1
1	2	1	1	1	2	2
2	0	0	2	5	4	2
3	0	3	0	8	3	4
4	3	0	2	1	3	1

Available		
A	B	C
3	4	1

2. Answer all these questions using the Bank's Algorithm. The objective of this exercise is to find out whether a request from Process 4 can be granted with the current state (see below). Process 4 requests the resources as described with this vector (1 3 2). Will the system grant this request?

i	Allocation			Need		
	A	B	C	A	B	C
0	3	0	2	7	1	1
1	2	1	1	1	2	2
2	0	0	2	5	4	2
3	0	3	0	8	3	4
4	3	0	2	1	3	1

Available		
A	B	C
3	4	1

False

3. Answer all these questions using the Banker's Algorithm. The objective of this exercise is to find out whether a request from Process 0 can be granted with the current state (see below). Process 0 requests the resources as described with this vector (4 0 0). Will the system grant the request?

i	Allocation			Need		
	A	B	C	A	B	C
0	3	0	2	7	1	1
1	2	1	1	1	2	2
2	0	0	2	5	4	2
3	0	3	0	8	3	4
4	3	0	2	1	3	1

Available		
A	B	C
3	4	1

False
