

1. Using three-threaded process to implement a program will raise these problems:
data-shared problem
2. The process control block for a two-threaded process will have _____ program counter(s).
2
3. The process control block for a three-threaded process will have _____ stack(s).
3
4. The process control block for a two-threaded process will have _____ register set(s).
2
5. A multithreaded process with three threads will require more resources than three single-threaded processes.
False
6. Check all that apply to a three-threaded process.
The three threads have separate stacks
The three threads share the process data segment
7. The process control block for a three-threaded process will have _____ data segment(s).
1
8. The process control block for a four-threaded process will have _____ files set(s).
1
