

1. These processes are CPU-bound.
WRONG
Editing a document using a word processor
Performing a Fast Fourier transform
Downloading an app

Performing a Fast Fourier transform
Performing a large matrix multiplication

2. During an observation cycle, a system executed:
1) 20 processes that took 20ms each
2) 40 processes that took 30ms each
3) 10 processes that took 40ms each.
The throughput of the system was _____ jobs per second.

35

3. Check all schedulers that may be invoked right after a process terminates.
short-term scheduler
medium-term scheduler

4. This scheduler is involved when a process must be kicked out from the CPU.
short-term scheduler

5. True or False?

Is it a good idea to draw a Gant Chart? The coming set of scheduling questions applies to the same CPU scheduling policy, the same processes with the same arrival times and CPU bursts lengths. It will definitely pay off to draw a Gant chart for the first question and use the SAME Gant chart for the next ones.

True

6. Based on the table below, Process P1 will enter the running queue at _____.

P1	6	8
P2	8	4
P3	4	10

WRONG
0

16

7. Based on the table below, Process P2 will enter the ready queue at _____.

P1	6	8
P2	8	4
P3	4	10

WRONG
6

4

8. Based on the table below, Process P3 will enter the exit or waiting/blocked queue at _____.

P1	6	8
P2	8	4

P3 4 10
16

9. Based on the table below, Process P1 will enter the ready queue at _____.

P1 6 8
P2 8 4
P3 4 10
WRONG
0

8

10. Based on the table below, the response time for Process P2 is _____.

P1 6 8
P2 8 4
P3 4 10
WRONG
2

0

11. Based on the table below, Process P3 will enter the ready queue at _____.

P1 6 8
P2 8 4
P3 4 10
WRONG
14

10

12. Based on the table below, Process P2 will enter the running queue at _____.

P1 6 8
P2 8 4
P3 4 10
WRONG
6

4

13. Based on the table below, the response time for Process P3 is _____.

P1 6 8
P2 8 4
P3 4 10
WRONG
4

2

14. True or False?

Is it a good idea to draw a Gant Chart? The coming set of scheduling questions applies to the same CPU scheduling policy, the same processes with the same arrival times and CPU bursts lengths. It will definitely pay off to draw a Gant chart for the first question and use the SAME Gant

chart for the next ones.

True

15. Based on the table below, Process P1 will enter the running queue the first time at _____.

P1	2	9
P2	9	4
P3	4	8

WRONG
0

9

16. Based on the table below, Process P3 will enter the running queue at _____.

P1	2	9
P2	9	4
P3	4	8

11

17. Based on the table below, Process P1 will enter the exit or waiting/blocked queue at _____.

P1	2	9
P2	9	4
P3	4	8

11

18. Based on the table below, Process P2 will enter the running queue at _____.

P1	2	9
P2	9	4
P3	4	8

4

19. Based on the table below, Process P3 will enter the ready queue at _____.

P1	2	9
P2	9	4
P3	4	8

9

20. Based on the table below, Process P2 will enter the exit or waiting/blocked queue at _____.

P1	2	9
P2	9	4
P3	4	8

19

21. Based on the table below, Process P2 will enter the ready queue at _____.

P1	2	9
P2	9	4
P3	4	8

WRONG

14

8

22. Based on the table below, Process P1 will enter the running queue the second time at

P1	2	9
P2	9	4
P3	4	8
-1
